Attorney's Docket No.: 113751.127 US1

21
concluded

during the interval, and calculating the vehicle's fuel efficiency from the amount of fuel consumed and the distance traveled during the interval.

24. (Once Amended) The method of claim 1, further including summing the transmitted parameter-related data for one of the plurality of vehicle parameters or a property derived therefrom to yield a summed property.

35. (Once Amended) The method of claim 4², wherein the analyzing further involves multiplying the summed property by a time interval.

22
46. (Once Amended) The method of claim 4², wherein the analyzing further involves multiplying the transmitted parameter-related data for said one of the plurality of vehicle parameter or a property derived therefrom by a time interval prior to summing.

57. (Once Amended) The method of claim 4², wherein the summed property is one of mass air flow, load, and load multiplied by engine speed.

68. (Once Amended) The method of claim 4², wherein the summed property is one of mass air flow, load, and load multiplied by engine speed multiplied by a time interval.

79. (Once Amended) The method of claim 4², wherein the summing involves using a microchip that is part of the wireless appliance.

810. (Once Amended) The method of claim 9⁷, wherein the summing occurs prior to the transmitting.

911. (Once Amended) The method of claim 7⁵, wherein the summed property is mass air flow, and the analyzing further comprises processing the summed property to determine an amount of fuel consumed.

A2
Conced

10 ~~12~~. (Once Amended) The method of claim ~~7~~⁵, wherein the summed property is mass air flow multiplied by a time interval, and the analyzing further comprises processing the summed property multiplied by a time interval to determine an amount of fuel consumed.

12 ~~14~~. (Once Amended) The method of claim ~~13~~¹¹, wherein the analyzing further comprises processing the integrated mass air flow to determine an amount of fuel consumed.

13 ~~15~~. (Once Amended) The method of claim ~~14~~¹², wherein the analyzing further comprises:
i) dividing the integrated mass air flow by an air/fuel ratio; and
ii) dividing the results from step i) by a density of fuel to determine an amount of fuel consumed.

A3

14 ~~16~~. The method of claim ~~15~~¹³, wherein the analyzing further comprises processing the amount of fuel consumed to determine fuel efficiency.

15 ~~17~~. (Once Amended) The method of claim ~~16~~¹⁴, wherein the analyzing further comprises dividing the amount of fuel consumed by the distance traveled to determine fuel efficiency.

16 ~~18~~. (Once Amended) The method of claim 1, wherein the parameter-related data also describes at least one of load, load multiplied by engine speed, load multiplied by a time interval, or load multiplied by engine speed multiplied by a time interval.

17 ~~19~~. (Once Amended) The method of claim ~~18~~¹⁶, wherein the load, load multiplied by engine speed, or a product thereof is summed to generate an integrated value.

18 ~~20~~. (Once Amended) The method of claim ~~19~~¹⁷, wherein the analyzing further comprises processing the integrated value to determine an amount of fuel consumed.

18
19/21. (Once Amended) The method of claim 20, wherein the analyzing further comprises multiplying the integrated value by a constant value to determine an integrated synthetic mass air flow.

20
22. (Once Amended) The method of claim 21, wherein the analyzing further comprises:
i) dividing the integrated synthetic mass air flow by an air/fuel ratio; and
ii) dividing the results from step i) by a density of fuel to determine an amount of fuel consumed.

A3
concluded
21/23. (Once Amended) The method of claim 22, wherein the analyzing further comprises processing the amount of fuel consumed to determine fuel efficiency.

22/24. (Once Amended) The method of claim 23, wherein the analyzing further comprises dividing the amount of fuel consumed by a distance traveled to determine fuel efficiency.

23/25. (Once Amended) The method of claim 1, wherein the analysis further comprises processing the vehicle's fuel efficiency to determine a secondary property of the vehicle.

25/27. (Once Amended) The method of claim 1, further comprising comparing the vehicle's fuel efficiency to a pre-determined parameter.

A4
26/28. (Once Amended) The method of claim 27, further comprising sending the vehicle's fuel efficiency or a property derived from the fuel efficiency to a user.

27/29. (Once Amended) The method of claim 28, wherein the sending comprises sending an electronic text, data, or voice message to a computer, cellular telephone, or wireless device.

A5
29/31. (Once Amended) The method of claim 1, further comprising displaying the data or a property calculated therefrom on a web site.

30~~32~~. (Once Amended) The method of claim 1, further comprising displaying fuel efficiency on a web site.

31~~33~~. (Once Amended) The method of claim 1, wherein the transferring involves serially transferring the data through an OBD-II connector or equivalent thereof in the vehicle to the wireless appliance.

32~~34~~. (Once Amended) A method for characterizing a vehicle's tire pressure comprising:
generating parameter-related data from the vehicle that describes at least one of a plurality of vehicle parameters including: vehicle speed, fuel level, engine speed, load, mass air flow, manifold air pressure, odometer reading;

transferring the parameter-related data to a wireless appliance comprising a wireless transmitter;

transmitting the parameter-related data with the wireless transmitter over an airlink to a host computer system;

analyzing the transmitted parameter-related data with the host computer system to calculate the vehicle's fuel efficiency, the analyzing comprising determining an amount of fuel consumed by the vehicle during an interval, determining a distance traveled by the vehicle during the interval, and calculating the vehicle's fuel efficiency by processing both the fuel consumed and the distance traveled during the interval; and

processing the vehicle's fuel efficiency to estimate a tire pressure value.

33~~35~~. (Once Amended) A method for characterizing a vehicle's fuel-injection system comprising:

generating parameter-related data from the vehicle that describes at least one of a plurality of vehicle parameters including: vehicle speed, fuel level, engine speed, load, mass air flow, manifold air pressure, odometer reading;

transferring the parameter-related data to a wireless appliance comprising a wireless transmitter;

transmitting the parameter-related data with the wireless transmitter over an airlink to a host computer system;

analyzing the transmitted parameter-related data with the host computer system to calculate the vehicle's fuel efficiency, the analyzing comprising determining an amount of fuel consumed by the vehicle during an interval, determining a distance traveled by the vehicle during the interval, and calculating the vehicle's fuel efficiency by processing both the fuel consumed and the distance traveled during the interval; and

processing the vehicle's fuel efficiency to characterize the vehicle's fuel-injection system.

34

~~36~~. (Once Amended) A method for characterizing an amount of fuel consumed by a vehicle comprising:

generating parameter-related data from the vehicle that describes at least one of a plurality of vehicle parameters including: engine speed, load, mass air flow;

transferring the parameter-related data to a wireless appliance comprising:

i) a microprocessor, and

ii) a wireless transmitter in electrical contact with the microprocessor;

integrating the parameter-related data over time with the microprocessor to generate integrated data;

transmitting the integrated data with the wireless transmitter over an airlink to a host computer system; and

analyzing the transmitted integrated data with the host computer system to determine the amount of fuel consumed by a vehicle.

35

~~37~~. (Once Amended) A method for characterizing a vehicle's fuel efficiency comprising:

generating data from the vehicle;

transferring the data to a wireless appliance comprising a wireless transmitter;

transmitting a data packet comprising the data with the wireless transmitter over an airlink to a host computer system; and

analyzing the transmitted data with the host computer system to determine the vehicle's fuel efficiency, the analyzing comprising determining an amount of fuel consumed by the vehicle

H6

A

during an interval, determining a distance traveled by the vehicle during the interval, and calculating the vehicle's fuel efficiency from the fuel consumed and the distance traveled during the interval.

³⁶
~~38~~. (Once Amended) A method for characterizing the amount of fuel consumed by a vehicle comprising:

generating data from the vehicle;

transferring the data to a wireless appliance comprising:

i) a microprocessor, and

ii) a wireless transmitter in electrical contact with the microprocessor;

integrating the data over time with the microprocessor to generate integrated data;

transmitting the integrated data with the wireless transmitter over an airlink to a host computer system; and

analyzing the transmitted integrated data with the host computer system to determine the amount of fuel consumed by the vehicle.

Please add the following new claims 39 and 40:

³⁷
~~39~~. A method for characterizing an amount of fuel consumed by a vehicle comprising:
generating data from the vehicle that describes a vehicle's fuel level;
transferring the data to a wireless appliance comprising a wireless transmitter;
transmitting the transferred data with the wireless transmitter over an airlink to a host computer system; and
analyzing the transmitted data with the host computer system to determine the amount of fuel consumed by a vehicle.--

³⁸
~~40~~. A method for characterizing a vehicle's fuel efficiency comprising:
generating data from the vehicle that describes a vehicle's fuel efficiency;
transferring the data to a wireless appliance comprising a wireless transmitter;
